## SUMMARY

Digital Media master's student building playable Unity game projects, with 4+ years of web development and a UX background. Focused on game UX/UI, HUD design, gameplay mechanics that teach themselves, and iterating from playtests.

## SKILLS

**Game Design:** Gameplay mechanics and systems, MDA framework, HUD and game UI, graybox prototyping, puzzle design

**Engines & Tools:** Unity 6 (WebGL, mobile touch builds), C# (learning), ShapesXR (VR), Figma, Git, AI-assisted development

**Testing & Teamwork:** Playtesting, bug reporting, usability testing, accessibility (WCAG), Agile teams, JavaScript, TypeScript

## EDUCATION

**Northeastern University** Expected Dec 2027

*Master of Professional Studies (MPS), Digital Media | Vancouver, BC*

- Coursework: Usability and Human Interaction, UX/UI Design, Game Design Fundamentals, Web Development, Data Visualization

**Guru Nanak Dev University** May 2018

*Bachelor of Technology (B.Tech), Computer Science and Engineering | Punjab, India*

## PROJECTS

Game code written with AI assistance (Claude, ChatGPT/Codex); I led the design, playtested the builds and documented each system.

**Tide Rush | Unity 3D Endless Runner** Nov 2026

*Playable beta: harshbuilds-1.github.io/games/tide-rush | 12-character shop, upgrades, missions, swipe controls*

- Prototyped a risk-and-recovery mechanic: a side hit lets a chasing wave catch up; a second hit within 6 s ends the run.
- Playtested builds and reported defects that led to fixes, such as an unfair hit rule and a jump animation that looked like flying.

**Tidebound | Unity 3D Exploration Game** Nov 2026

*Personal project | Playable WebGL build: harshbuilds-1.github.io/games/tidebound*

- Designed a level around one systemic rule (a 90-second tide cycle that floods and reveals paths), mapped with MDA.
- Teaches the rule without a tutorial: play opens at high tide with the goal in sight; a tide HUD and no-death respawn invite play.

**Last Signal | Unity Space-Rescue Game** Nov 2026

*Personal project | Playable WebGL build: harshbuilds-1.github.io/games/last-signal*

- Designed the HUD to support fast, fair rescue choices: off-screen indicators and danger cues that never rely on colour alone.
- Tuned difficulty from playtest notes: raised the damage threshold from 4 to 7 m/s and added 10 s of oxygen for new players.

**The Last Train: Platform Zero | VR Escape Room** Oct 2026

*Northeastern course project | ShapesXR*

- Storyboarded a three-step puzzle flow (restore power, trace the route, catch the train), tying each clue to a visible result.

**Unity Play Lab | Five Mechanic Prototypes** Oct 2026

*Last Delivery (DGM6670), Soap Panic, Stack & Splat, Checkpoint Run, Rescue Ranch | harshbuilds-1.github.io/unity-games*

- Mechanic studies in timing, momentum, balance and risk/reward, with checkpoints and quick retry so failure stays recoverable.

## EXPERIENCE

**Freelance Web Designer and Developer** Jun 2026 – Present

*Self-employed | Client: Hair by Gurbina (live salon website) | Metro Vancouver, BC*

- Redesigned the information architecture of a live salon website, repositioning it from bridal-only to full-service.

**Assistant Team Lead** Sep 2024 – Jul 2025

*Honda of Canada Manufacturing | Machine Operator, Sep 2023 – Aug 2024 | Alliston, ON*

- Supervised 8–12 team members per shift on a robotics production line while maintaining 98% on-time delivery.

**Full-Stack Developer** Jul 2022 – Aug 2023

*Div Edge Technologies | Mohali, India*

- Built responsive, reusable React components for 8+ web applications, improving user satisfaction scores by 30%.

**Web Developer** Aug 2018 – Dec 2021

*Ops Solutions Pvt. Ltd. | Chandigarh, India*
